

codeview test

Default (input) box, C++:

```
helloworld.cpp

1 #include <iostream>
2
3 int main() {
4     std::cout << "Hello world" << std::endl;
5     return 0;
6 }
```

C code with the default settings, then its output:

```
1 // print a value
2 printf("Hello World");
3 double x = 3.14159 * 2;
```

```
>> Hello World
```

Custom background, Python (numerical method):

```
newton.py

1 import numpy as np
2
3 def newton(f, df, x0, tol=1e-8):
4     for i in range(50):
5         x1 = x0 - f(x0)/df(x0)
6         if abs(x1 - x0) < tol:
7             return x1
8         x0 = x1
9     return x0
10
11 print(newton(lambda x: x**2 - 2, lambda x: 2*x, 1.0))
```

```
>> 1.414213562373095
    converged in 5 iterations
```

MATLAB without title bar and line numbers, dark green:

```
x = linspace(0, 2*pi, 100);
plot(x, sin(x)); % plot
```

Shell command with output and shadow:

```
terminal

1 gcc hello.c -o hello && ./hello
```

```
Hello World
```
